

Healthcare competitive intelligence that survives a compliance review.

Every claim is sourced to a public URL with a capture date. No autonomous CI ships — a human reads every statistical claim, approves every strategic conclusion, and signs before it leaves. The 34-pattern audit runs on everything.

THE CONSTRAINT

Public sources only. Regulatory filings, trial registries, peer-reviewed publications, conference abstracts, company disclosures, patent filings, verified trade press. If it requires deception, confidentiality breach, or non-public information — it is not CI. It is espionage, and I will not do it.

This is not merely a legal posture. It is the **differentiator**: a client's compliance team can approve this vendor without a second meeting.

THE METHOD

A 9-step numbered process. Each step produces a named, dated file. If a stage has no artifact visible, it is either a human review or an automated audit — never an invisible black box.

Frame the question → Pull from public surfaces → Evidence every claim → Analyse the data → Synthesise the consequence → Audit against the slop list → Apply the citation auditor → Bundle for the call → Ship a named, dated package.

WHAT YOU RECEIVE

Every engagement is a **dated, named package** — not a single PDF dumped into a folder. Each artifact is designed for the senior reader walking into a 10-minute conversation.

PROSPECT DOSSIER

1 PER ACCOUNT
— 3–5 PAGES

Company overview.
Evidence-based pain points. Buying triggers. Decision-maker map. Outreach hook.

COMPETITOR BATTLE CARD

PER COMPETITOR — 1 PAGE

Positioning, talk tracks, landmines, differentiation angle, proof points that resolve to a study.

SWOT + EXECUTIVE

1 PAGE EACH

Synthesised — not template boilerplate. Every claim cited. Readable in 90 seconds.

QUALITY — NON-NEGOTIABLE

Every material claim resolves to a public URL. Confirmed / disputed / unverified is labeled explicitly — never blended. A model drafts; a human approves. The 34-pattern AI-slop audit runs on every deliverable before it ships.

"Every package is a complete CI brief where every factual claim carries a citation. Peer-reviewed studies and public filings behind every claim — with resolvable citations your team can hand to a clinical reviewer."

THE KLARIX METHOD — PUBLICLY PUBLISHED

3

Three quality gates. Every claim resolves to a URL or named document (citation auditor). Every statistical claim is reviewed by a human (analyst sign-off). Every deliverable passes the 34-pattern audit (no generic hedging, no unsourced assertions, no structural padding).

METHODOLOGY — The VigilLine Method (public, auditable): Frame → Pull → Evidence → Analyse → Synthesise → Audit → Citation check → Bundle → Ship.

DELIVERY — 3–7 days from brief sign-off. **PRICE** — ₹20,000 – ₹60,000 (landscape); ₹25,000 – ₹1,20,000/mo (retainer). **COMPLIANCE** — Public sources only; no non-public, confidential, or employer-derived information is used or solicited.

What VigilLine actually delivers.

Every output is a dated, named package — not a PDF dumped into a folder. Every claim resolves to a URL or named document. A compliance team can approve this vendor without a second meeting.

THE SIX OFFERS

LANDSCAPE REPORT

3–7 DAYS | ₹20,000 – ₹60,000

Marketed & pipeline assets. Mechanism classes. Trial-level detail (N, effect size, CI, safety). Strategic implications. 15–30 pages, modular.

BATTLECARD SET

1–2 WEEKS | ₹12,000 – ₹30,000

One card per competitor — 1 page max. Talk tracks, landmines, differentiation, proof points. Readable in 60 seconds. Every claim cited.

PIPELINE TRACKER

1–2 WEEKS | ₹25,000 – ₹75,000

A living tracker — updated continuously. Asset, company, phase, mechanism, key readouts, next catalysts. Refresh retainer available.

MARKET ENTRY

2–3 WEEKS | ₹40,000 – ₹1,50,000

Assessment for entering a market or indication. Landscape, barriers, competitive response, opportunity sizing. 25–50 pages.

WIN/LOSS

4–6 WEEKS | ₹30,000 – ₹90,000

Requires client access. Why deals were won or lost. Not offered initially — only after trust is established.

MONTHLY RETAINER

MONTHLY | ₹25,000 – ₹1,20,000/mo

Continuous monitoring + monthly briefing + ad-hoc questions + quarterly deep-dive. 3-month minimum, rolling monthly after.

HOW IT WORKS — THE NINE STEPS

01

FRAME

30-min kickoff. Brief written in client's language, signed off. No brief = no start.

02

PULL

Public surfaces: regulatory, trial registries, journals, conferences, filings, patents. Confirmed vs inferred labeled.

03

EVIDENCE

Every claim: URL or named document + capture date. N-sample discipline across sources.

04

ANALYSE

Trial-level detail — N, endpoint, HR with CI, grade 3+ toxicity. Not a press-release summary.

05

SYNTHESISE

What does this mean for the client's positioning? Human judgement. Not automatable.

06

AUDIT

34-pattern AI-slop check — hedging, unsourced assertions, structural padding removed.

07

CITE

Citation auditor: every material claim resolves. If not, removed. Automated + human spot-check.

08

BUNDLE

Dossier + battle card + SWOT + one-pager + source list. Structured for a 10-minute call.

EVIDENCE FROM REAL WORK

Below is an excerpt from an actual deliverable — a Phase 3 trial readout, presented exactly as it appears in a VigilLine landscape. Not a mockup. This is the standard.

SAMPLE EVIDENCE BLOCK — FROM A REAL LANDSCAPE

Median OS: 18.5 months (Ris-Rez) vs 10.3 months (topotecan). **Median PFS: 7.2 vs 3.0 months**. IRC-assessed ORR: 58.3% vs 12.6%. Grade 3+ TRAEs: 60.9% vs 78.2%. — **461 patients** (230 Ris-Rez, 231 topotecan) in China. **First Phase 3 OS benefit for a B7-H3 ADC in any tumor type**.

SOURCE: GSK Press Release — WCLC 2026, Seoul (Sept 2026) · Trial: ARTEMIS-008 · Phase 3 · N=461 · Capture date: 2026-09-13

That is the standard. N, effect sizes, confidence intervals, safety, and the "first ever" significance — all cited, all verifiable.
