Novartis stands by its $12 billion Avidity bet after a $1.9 billion impairment

A charge on a failed late-stage neuromuscular asset and a public reaffirmation of the deal sit in the same disclosure. The chief executive's words describe the transaction, not the science behind it.

Novartis has disclosed a $1.9 billion impairment charge on a failed late-stage neuromuscular disease asset, and Vas Narasimhan, its chief executive, said the $12 billion acquisition of Avidity Biosciences “remains absolutely on track”, Endpoints News reported.

The pairing is the substance of the story for anyone assessing large-pharma deal discipline. An impairment is an accounting recognition that cash flows once expected will not arrive; a reaffirmation is a statement of intent about a transaction the company has already committed to. The two numbers are reported together because the first raises a question about the second.

What the reaffirmation does not do is price the assets. “On track” describes process — that the transaction proceeds on its agreed terms — rather than evidence that the programmes inside it have met their endpoints. A reader tracking RNA-directed platforms should keep the charge and the commitment as separate facts: one is a write-down against a specific late-stage programme, the other a statement about a deal.

The material reviewed does not name the failed asset or the trial it failed in, does not give the timing of the charge, and does not set out the structure of the Avidity transaction or any conditions still outstanding. VigilLine is not reporting figures or dates that the source does not state; the size of the write-down relative to the purchase price is therefore not something this issue can calculate.

IN NUMBERS

$12 billion

value of Novartis’s acquisition of Avidity Biosciences, which its chief executive said remains “absolutely on track”

$1.3825 billion

maximum value of Ferring’s agreement to acquire the fertility startup Gameto

₹1,200-1,300 crore

valuation implied for Sabine in Indira IVF’s acquisition talks, per ET HealthWorld
